Das Prüfgerät ist zum Prüfen und Messen an instandgesetzten oder geänderten elektrischen Geräten nach DIN VDE 0701 oder DIN VDE 0702 bestimmt. Gemäß diesen Vorschriften müssen nach einer Instandsetzung oder Änderung elektrischer Geräte der Schutzleiterwiderstand, der Isolationswiderstand, der Ersatz-Ableitstrom und bei Datenverarbeitungs-Einrichtungen und Büromaschinen die Spannungsfreiheit berührbarer leitfähiger Teile gemessen werden.

The tester is intended for the testing and measurement of repaired or modified electrical devices in accordance with DIN VDE 0701-702. These regulations require the measurement of protective conductor resistance, insulation resistance and equivalent leakage current for repaired or modified electrical devices, as well as testing for the absence of voltage at exposed, conductive parts for data processing systems and office machines.

(2) Signallampe PE zur Prüfung des Netzschutzeiters
Die Signallampe PE leuchtet, wenn zwischen der berührten Kontaktfläche (4) und dem Schutzkontakt des Netzzanschlusssteckers (1) eine Potentialdifferenz von ≥ 100 V besteht.

(3) Krokodilklemme (Greifklemme zum Aufstecken auf die Prüfspitze)
Mit der Krokodilklemme schließen Sie, zur Messung des Schutzleiterwiderstandes, das Gehäuse des Prüflings an. Achten Sie dabei auf guten Kontakt!

(4) Kontaktfläche am Mains-Steckkontakt
Beim Berühren der Kontaktfläche leuchtet die Signallampe (2), wenn zwischen dem Schutzleiter PE des Netzzanschlusssteckers (1) und der berührten Kontaktfläche eine Potentialdifferenz von ≥ 100 V besteht.
Die Kontaktfläche ist von allen Anschlüssen und von der Messschaltung galvanisch getrennt und entspricht somit der Schutzklasse II!

Prüfen der Schutzleiterpotentiale

Berühren Sie mit dem Finger die Kontaktfläche (4) und gleichzeitig ein geerdetes Teil (z.B.

Wasserleitung). Die Signallampe PE (2) darf dabei nicht leuchten! Das Potential zwischen dem Schutzleiter des Netzzanschlusssteckers (1) und der Kontaktfläche (4) ist dann ≤ 100 V.

(2) PE Signal Lamp for Protective Conductor Testing

The PE signal lamp lights up, if a potential difference of > 100 V occurs between the contacting surface (4) and the earthing contact at the mains plug (1).

(3) Alligator clip (holder clip) for attachment to the test probe

Connect the housing of the device under test with the alligator clip for measurement of protective conductor resistance.

(4) Contacting Surface for Contact Finger

The PE signal lamp (2) lights up, if a potential difference of ≥ 100 V occurs between the PE protective conductor at the mains plug (1) and the contacting surface. The contacting surface is electrically isolated from all terminals, as well as from the measuring circuit, and thus conforms to protection class II!

Testing Protective Conductor Potential

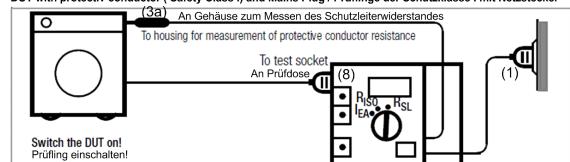

Bring the contact finger into contact with the contacting surface (4) and, at the same time, with a grounded object (e.g. a water pipe). The PE signal lamp (2) must not light up! Potential between the mains plug protective conductor (1) and the contacting surface (4) is then ≤ 100 V.
