

Steam cleaner

SC 1402

Overview

The Speciality of the SC 1402 is the permanently refillable water tank:

This allows to avoid the inevitable interruptions of work while cleaning or ironing. Before the refilling of a conventional steamer, the pressure of the boiler has to be reduced so that the safety valve can be opened. Then only after, the unit can be refilled with water and be reheated. –The Speciality of the SC 1402 is the permanently refillable water tank:

Description

The SC 1402 is the first Kärcher steam cleaner with permanently refillable water tank in the consumer range. Therewith Kärcher provides a highend-unit in the comfort-class, which distinguishes itself by its improved price quality ratio.

As the 1 l fresh water tank can be permanently refilled with water, it is also possible to clean big surfaces without any inevitable interruptions of work. With a maximum pressure of 3,5 bar, this unit provides a high steam discharge rate for an excellent cleaning effect. Limescales, greasy deposits and other hard stains can be effectively but also environment friendly removed. Thanks to its steam regulator at the steam pistol the steam flow can be adjusted according to the clean surface and the degree of soil.

This unit has been designed to look attractive and, at the same time, to offer a maximum of user convenience. Typical features of the attention to detail are the easily understood controls, the plug-in fittings for the steam tubes as well as the large wheels for smooth mobility and manoeuvrability.

Steam cleaner

SC 1402

Application

The Kärcher SC 1402 can be used everywhere in the home:

- On hard surfaces
