

# **TASKI IntelliPower**

Introducing Lithium Ion batteries to TASKI scrubber driers

### **Allowing Opportunity Charges**

Quick Plug-ins for partial charges will not damage the batteries. Charging in breaks can even extend the total range.

## Fast Charging

Batteries will be full in approximately 2 hours instead of more than 10 hours. If the battery is low, getting it back to 60% happens very quickly. The machine can always be taken off the charger without negative effects and is always ready for cleaning.

### Life Span & No Maintenance

Lithium-Ion batteries will last between 2000-2500 cycles. Allowing the battery to last as long as the machine under normal conditions. The batteries are maintenance free.

#### Range

Depending on the configuration, the range can also be extended significantly. In any case, the range will always be similar or more compared to conventional batteries. Multiple charges per day will extend it by a large margin.

## **TCO & Efficiency**

Lithium batteries offer great TCO (up to 25% savings on machine + battery) and increased efficiency of the machine (+4%) due to higher and more constant power output.

\* Weight only includes the battery. Additional weight kits and fitting material is added to hold the battery securely in place and maintain brush pressure. \*\* Battery Cycles are dependant on many factors: o.a. depth of discharge and charging time. Therefore the number of total cycles will vary.
